Dear Mr. Hoye,

Enclosed you can see the corrected version of my Patent Application. I think I corrected all mistakes you pointed to. Concerning Wilcox patent I can say that their idea is looks like mine but it is different. Theirs idea is to make some devise which will do the interactive connection by itself. They want to put inside all the devises to be able to do this connection. I don't need it. The customer can place an order right now using any digital cable/dish box with remote control. I need just one extra devise to transfer analog signal to digital. But I don't have to put this devise inside the cable/dish box. I can use it separate. So my idea is different and it is more general.

If you have any more questions or I have to do more corrections please let me know at 310-371-0480 or e-mail fems@mail.ru

Sincerely,

Radik Ismagilov.
